

RESPIRE

Responsible Piloting and Reporting Tool

What is our process of reporting?

DrivingChange™ is our commitment to Corporate Social Responsibility. We believe in being a responsible partner to the people, businesses and communities we work closely with.

DPDgroup is committed to making every parcel delivered carbon neutral. The first step in our programme is to acknowledge the Green House Gas (GHG) emissions resulting from our activity. Therefore, we have a sustainability reporting tool - RESPIRE. Key performance indicators, KPIs, are followed quarterly in order to assess the carbon footprint and the environmental impact of our activity.

Data is analysed and verified for every site in

the perimeter

During the verification, modifications to the sites are requested if necessary

An internal report is issued every quarter to each site. The KPI and carbon footprint are closely monitored

An external audit is held every year to verify the amount of GHG emission to be offset

The verified transport emissions are offset in renewable and cleaner energy production projects
